Actually, its been on Elise's radar since the beginning. If there's more to tell since the Friday call, then we should include it.

Consulting with Ron Williams sounds like a good idea. I knew there was another arrangement like this one, I just couldn't remember the particulars.

I'll stop by tomorrow, maybe late in the morning. I need to talk to you about your workload and whether its reaching a tipping point. The new items in the group's portfolio shouldn't take much of my time (and one, social media, has really never left it) and Randall seems to have a bit more free time now.

Hi Geoff. No worries. Truly, this project should be with Sarah/me anyway. And NRMRL too.

Since it's on Elise's radar now, do we add this to reg review?

This is a little unusual for a CRADA – evaluating others' technologies. But we did it with Ron Williams – we used a series of MCRADAs for air sensors (not water sensors). And he held a “technology day” of sorts – where all of the vendors came in on the same day. I think we should consult with Ron on how best to do this.
